Quality makes the difference.

Straight and safety pins from Prym are well-known branded articles. They are recognised by their top-quality finish and easy-to-grip handling, complemented by slender points, which are gentle to all materials, and rounded off by optimal flexibility.

Brass pins from Prym are absolutely rustproof, even when left in the fabric (e.g. curtains) for longer periods of time. Hardened and tempered steel pins provide superior rust protection and a perfect balance between flexural strength and flexibility. Needlework could not be easier.

... from cap to spring.

Cap

All caps are evenly drawn with no burrs or sharp edges.

Spring resilience

Thanks to maximum spring resilience, the safety pins are easy to open, yet close firmly and securely.

Point

The slender points of the safety pins facilitate penetration into the material without damaging it.

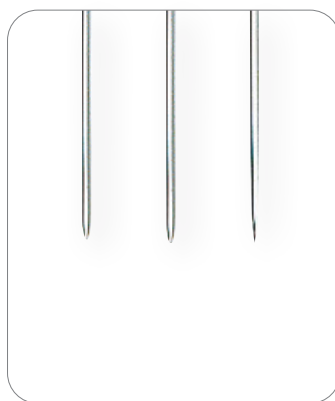

... from head to point.

Pin heads

Burr-free and smoothly finished, the lens-shaped heads provide an optimal and easy-to-grip pressure area.

Coloured heads make each pin easy to see so nothing is left in the fabric or garment. Glass heads made of high-grade Murano glass are not only absolutely burr-free, they also withstand ironing.

Point

The slender points of the pins allow easy penetration even into tougher material without damage to the fabric.

Working flexibility

Thanks to their balanced working flexibility, the pins have excellent resilience, preventing bending or breaking of the pins.

Surface

A careful and even surface finish increases the smoothness of the pin shaft and protects against rust.

Stitch by stitch – perfect and precise.

Centuries of experience in metal processing, combined with the latest production technology available today, make Prym sewing, embroidery and darning needles perfect precision tools.

The needle range from Prym sets international standards – not only in quality, but also in the variety of the assortment. Here, specialists will find their special needles.

Needle facts

The needle gauge is indicated by a number. The higher this number, the finer the needle. For each type, the length of the needle and the size of its eye are adapted to the diameter of its shaft or the gauge.

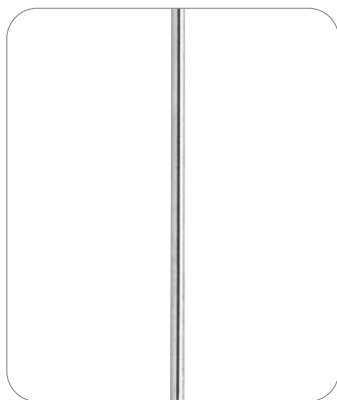

Head

The heads are finger friendly with a burr-free finish.

Eye

The eyes have a smooth and snag-free surface to facilitate threading and avoid thread damage.

Each needle of the same type has the same eye symmetry.

Surface

Uniformly polished, non-porous and refined surfaces guarantee excellent smoothness and good protection against rust.

Spring resilience

The precision calculated and controlled spring resilience of the needle ensures smooth sewing without bending or breaking.

Point

For each material application, there is the optimal point. For normal sewing work the point is long and especially slender.

Leather requires triangular points to enable penetration without tearing. Tapestry needles with blunt points facilitate embroidery on coarse-weave fabrics.

Precision even before the sewing.

Quality makes the difference – also for sewing machine needles. Perfected geometry and first-class machining of each needle from the Prym assortment always produce a perfect, professional result.

The wide range of products allows individual sewing techniques: whether embroidering on fine linen, dressmaking with ultra fine microfibres or the sewing of thick materials such as corduroy, denim and sail cloth – with sewing machine needles from Prym every material can be sewn.

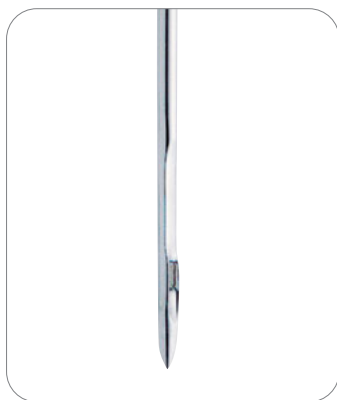

Eye

Specially polished eyes prevent the thread from breaking, no matter how fast the machine is running.

Point

The variety of point shapes, needle gauges and eyes provide optimal conditions for working with different materials and sewing threads.

Flute

The flute facilitates looping without skipped stitches and ensures close positioning of the needle to the hook.

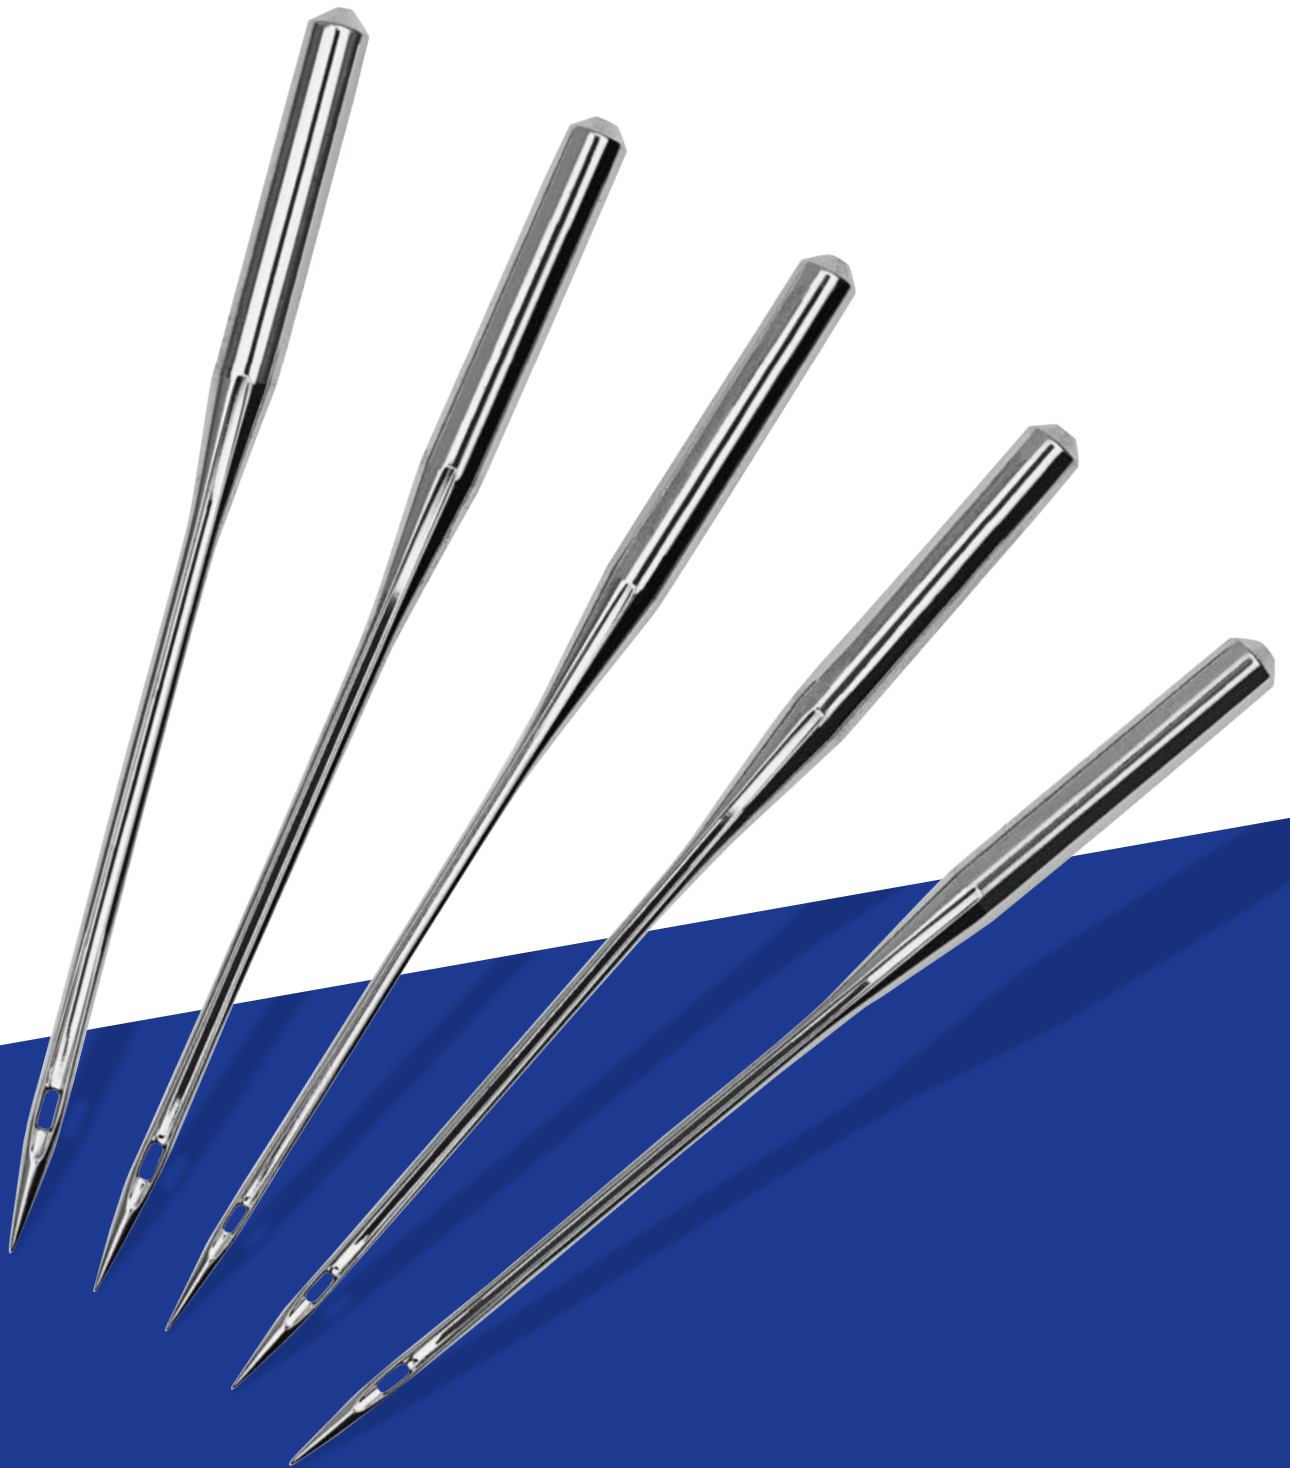

Shank

Flattened shanks guarantee correct insertion of the needle. The dimension of the flattened side is adapted to the corresponding needle gauge, ensuring the ideal spacing between needle and hook and thus faultless looping.

Vertical groove

The vertical groove takes up the thread and enables faultless thread feed at the point of penetration.

Sewing machine needles and accessories

Needle type	Type	Area of application	Fabrics	Needle gauge	Needle shape
Universal H	standard	almost all natural and synthetic fabrics	chiffon, georgette, opal, organza	60, 70	
			batiste/cambric, artificial silk	70
